DETAILED ACTION

- 1. Claims 7-10, 12, 15, 22-25, 27, and 30 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention as previously set forth. Applicant elected without traverse.
- 2. Claim 16-21, 26, 28, and 29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are directed to a blank. However, there are several recitations that defining a container, e.g. top, bottom. It is unclear what is the claimed subject matter.

3. Claims 1-6, 11, 16-21, and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Chadwick, II (4492723). Chadwick, II teaches a blank having four corners, with first fold line and second fold line about Li, defining a side panel and defining a bottom panel as claimed.

It is noted that Chadwick teaches the gluing of various parts together for closing the container in Fig. 36.

- 4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chadwick, II. To the degree it is argued that there is no teaching the step of sealing the top panels, It would have been obvious to one of ordinary skill in the art to attach the top panels T at portions Le to keep the container secured.
- 5. Claim 1-6, 11, 13, 14, 16-21, 26, and 28-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Beutler (D457028) or Beutler (442862). Beutler teaches a container with four curved sidewalls. With respect to the method as claimed. the container as shown would have been inherently erected by the steps as set forth. With respect to the blank as claimed, the

Application/Control Number: 10/690,336

Art Unit: 3727

container as shown by Beutler '028 would have been inherently erected by a blank as set forth in the claim.

Regarding claims 3 and 18, each of the curved portions in the two Beutler references has a straight small portion as claimed.

To the degree it is argued that Beulter does not teach the method as claimed, It would have been obvious to one of ordinary skill in the art to erect the container from a unitary blank in Beutler as taught by Kuhn et al. to provide a material for the construction of the container.

6. Claims 3 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beutler (D457028) or Beutler (442862).

To the degree it is argued that there is no straight portion in the curved portions. It would have been obvious to one of ordinary skill in the art to provide a straight portion over at least portions of the lengths to provide the desired shape for the sidewall of the container since matter relating to ornamentation only which have no mechanical function cannot be relied upon to patentably distinguish the claimed invention from the prior art. In re Seid, 161 F.2d 229, 73 USPQ 431 (CCPA 1947)

7. Claim 1, 3-4, 13, 14, 16, 18-19, 21, 26, and 28-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Kuhn et al. (5305951). Kuhn teaches the folding of a blank having four quadrant first and second fold lines (first line is comprised of 50, 50, and 55, the second fold line is portion 36) both lines are disposed opposite of an imaginary diagonal line (from respect end of lines 91).
